

## Difference Between SCL-Polishing Milk Shake & SCL-Marble Polishing Powder:

**Polishing Milk Shake**—designed to remove etched mark & dull spot (small) area commonly seen at marble vanity top.

**Marble Polishing Powder**—designed to restore dull area near entrance, family area and shower area. Area size to polish must not exceed 25 sq.ft. Sever dullness and whole unit of floor area dullness require the Professional.

## How to apply SCL Polishing Milk Shake

You may use same way to restore solid surfacing vanity top besides using on marble top

Etched mark caused by hand soap

### Step 1:

Shake well before use. Put 1/2 or one teaspoon of the polishing milk shake onto the etched area or dull spot.

Step 2: Rub in a circular motion with the red polishing pad. Exert some strength to the rubbing will speed up the polishing process. While rubbing, count 1 to 50 (approximately one minute).

Step 3: Wipe away milk shake solution with a dry cloth or paper towel.

Step 4: Spray on SCL-Stonemist onto the marble surface and wipe away remaining residues with a dry cloth or paper towel.

Repeat step 1 to 3 and increased the rubbing duration (counting) if the etched mark is lightened.

SCL-Clear Enhancer Sealer protects stone from staining, same time will further enhance a darker color stone such like the brown, black & green vanity top.

Apply enhancer sealer after removing the dull spot.
